Protect the Infant Industry

BY GUARDING AGAINST IMPURE MILK

The appalling infant mortality of the summer months is largely due to the dangerous quality of milk furnished most communities and particularly the larger cities. A Baltimore hospital recently examined the milk supplied to it and found an average bacterial content of over four million to the c. c. The New York Board of Health found many samples that ran over ten million; these are but instances.

Most peddled milk is absolutely dangerous during the summer months and is a leading cause of the high mortality in children. In many cities there are three deaths from Cholera-Infantum to one of Tuberculosis.

HIGHLAND BRAND EVAPORATED CREAM

Is absolutely pure, germ-free, always fresh. It is the simplest, yet the most complete substitute food for infants and invalids. Always ready. Just dilute with water q. s. and give to baby. Trial quantity free to physicians.
